

Assignment – 19:

Problem Statement:

Create Structure EMPLOYEE for storing details (Name, Designation, gender, Date of Joining and Salary). Define function members to compute a) total number of employees in an organization b) count of male and female employee c) Employee with salary more than 10,000 d) Employee with designation “Asst Manager”

Code:

```
#include <stdio.h>

#include <string.h>

struct EMPLOYEE
{
    char name[100];
    char designation[100];
    char gender;
    char doj[15];
    int salary;
};

void gendercount(struct EMPLOYEE emp[], int n)
{
    int male = 0, female = 0;
    for (int i = 0; i < n; i++)
    {
        if (emp[i].gender == 'M')
        {
            male++;
        }
        else if (emp[i].gender == 'F')
        {
            female++;
        }
    }
}
```

```

    }
}
printf("Male Employees = %d\n", male);
printf("Female Employees = %d\n", female);
}
void highsalary(struct EMPLOYEE emp[], int n)
{
    printf("Employees with salary more than 10000: ");
    for (int i = 0; i < n; i++)
    {
        if (emp[i].salary > 10000)
        {
            printf("%s ", emp[i].name);
        }
    }
    printf("\n");
}
void asstmanager(struct EMPLOYEE emp[], int n)
{
    printf("Employees with designation AsstManager: ");
    for (int i = 0; i < n; i++)
    {
        if (strcmp(emp[i].designation, "AsstManager") == 0)
        {
            printf("%s ", emp[i].name);
        }
    }
    printf("\n");
}

```

```

int main()
{
    int n;
    printf("Enter number of Employees: ");
    scanf("%d", &n);
    printf("\n");
    struct EMPLOYEE emp[n];
    for (int i = 0; i < n; i++)
    {
        printf("Enter name of Employee %d: ", i + 1);
        scanf("%s", emp[i].name);
        printf("Enter designation of Employee %d: ", i + 1);
        scanf("%s", emp[i].designation);
        printf("Enter gender (M/F) of Employee %d: ", i + 1);
        scanf(" %c", &emp[i].gender); // FIXED
        printf("Enter date of joining (DD-MM-YYYY) of Employee %d: ", i + 1);
        scanf("%s", emp[i].doj);
        printf("Enter salary of Employee %d: ", i + 1);
        scanf("%d", &emp[i].salary);
        printf("\n");
    }
    printf("Total number of employees = %d\n", n);
    gendercount(emp, n);
    highsalary(emp, n);
    asstmanager(emp, n);
}

```

Input & Output:

Enter number of Employees: 2

Enter name of Employee 1: Ravi

Enter designation of Employee 1: AsstManager

Enter gender (M/F) of Employee 1: M

Enter date of joining (DD-MM-YYYY) of Employee 1: 12-05-1997

Enter salary of Employee 1: 12000

Enter name of Employee 2: Anita

Enter designation of Employee 2: Clerk

Enter gender (M/F) of Employee 2: F

Enter date of joining (DD-MM-YYYY) of Employee 2: 10-01-2007

Enter salary of Employee 2: 8000

Total number of employees = 2

Male Employees = 1

Female Employees = 1

Employees with salary more than 10000: Ravi

Employees with designation AsstManager: Ravi
